Projects

Solving and Generating Numberlink puzzles - My Bachelor Project

A program written in C++ capable of encoding any Numberlink puzzle into a SAT problem. Minisat, a SAT solver, could output a satisfiable solution to the encoded puzzle. If the puzzle is solvable, the program is able to decode Minisat's output to show its solution in a human readable form.

Market Readiness Measurement Tool - Commercial Software

A web application, written in Python using Flask, assists in measuring the progress of startups participating in various programs of the company PLNT. This is done by letting users fill in a form and giving them an autonomously generated and customized report.

Tiny Doctor - Videogame

A videogame made in Godot in which the player is instructed to enter a patient as a tiny doctor to combat their issue from the inside. This game has metroidvania and 2D platformer elements where the player can defeat enemies with unlockable weapons and explore through the means of parkouring.
